ELECTROMAGNETIC FLOW METER

General

MagFlux® Q Electromagnetic Flow Meter, created in composite materials, designed with an optimized construction which secures optimal performance. MagFlux® Q provides you very stable and highly accurate flow measurements in conductive liquids, especially at low flow velocity.

MagFlux Q is constructed without outer metal parts, which makes it a perfect solution for areas that provide risk of corrosion.

MagFlux® Flow Meters have no moving parts to create hydraulic influence on the flow, use a well-proven technology, and communicate using a standard protocol.

MagFlux® Flow Sensors are available in the sizes DN 50, DN80, DN 100 and DN150 with standard construction lengths and EN flanges.

MagFlux® Flow Meters can be installed either with the converter compact mounted on the flow sensor, wallmounted or mounted in a remote panel.

Features

- Sensor in ABS Plast, no outer parts in metal
- Very high precision at low flow speed
- Hastelloy C electrodes
- High dynamic measuring range with an accuracy of up to 0,25%
- Works perfectly with classic MagFlux sensors and converters
- Low weight
- Ideal for sea water applications, e.g. aqua culture

Application

MagFlux® Q Flow Meters are used for measuring and totalizing flow of conductive liquids in pressurized closed pipe systems.

MagFlux® Q Flow Meters measures in both directions of potable water; waste water and process fluids, but also aquaculture, naval installations and other similar installations, with sea water or even heated salt water.

The high precision on very low velocity, 0,1 m/s, is making the MagFlux Q a perfect solution for district measuring wells, measuring drinking water and detect water loss even in small leaks.

MagFlux™ Q Electromagnetic Flow Meter

Mounting Data

Accurate flow measurement requires a minimum of three (3) pipe diameters of straight pipe

upstream and two (2) pipe diameters of straight pipe downstream from the center of the Flow Sensor.

Minimum pipe diameter distances for +/- 0,25 % accuracy

Special design allows using short build-in construction still providing very accurate flow measurement even at one (1) pipe diameter

of straight pipe upstream and one (1) pipe diameter of straight pipe downstream from the center of the Flow Sensor.

Minimum pipe diameter distances for up to 0,5% accuracy
